

Air-Pak Zero Loss Drain Valve

Air-Pak Zero Loss Drain Valve offer an effective solution for removing condensate within compressed air systems. **Air-Pak** auto drain works in unison within either **Air-Pak** dryer systems, in line filters or compressor unload pressure signal. It is a proven design offering a practical, reliable and cost effective solution in reducing costly downtime and pneumatic maintenance.

Problem:

- Condensate damages pneumatic components
- Creates unreliable supply of compressed air
- Downtime and pneumatic component failures increase
- Formation of rust and scale in the air piping system.

Solution:

- Air-Pak Zero Loss auto drain
- Can be installed in unison with Air-Pak Dryer systems
- Pneumatically operates with air dryer timed cycles
- May be installed direct to air compressor pressure control
- Works with in-line filters
