

Air-Pak Portable Drying Systems

Air-Pak air dryer systems offer an effective solution for removing water, particulates and oil vapor within compressed air systems. The **Air-Pak** systems proven design offers a practical, reliable and cost effective solution reducing costly downtime and pneumatic maintenance.

System shown designed for 400 CFM portable air and equipped with:

- Inlet and outlet pressure gauges
- Three in one system removes oil, contaminants and moisture.
- Thermostatically controlled heaters to prevent unloader valve freezing
- 12 VDC power connects directly to compressor electrical system
- Mounted in heavy gauge steel for protection and ease of handling
- Straightforward design provides reliable operation
- Typically requires less than 10% regeneration air
- Achieves -40° F* pressure dew point
- Additional units can be added for:
 - air system modifications
 - flow rates exceeding 40 CFM

*Pressure dew points vary based on system pressure and flow rates
